ORAHS 2011

Outline

- **Background : Ile de France region and perinatal health policies**
- **Objectives**
- **Methods**
- **Results**
 - Socio-economic characteristics
 - Perinatal indicators
 - Perinatal structures
 - New allocation of resources proposal
 - Spatial heterogeneity: Focus on Hauts de Seine district
- **Discussion**
- **Conclusion**

Background(1): Parisian region (IDF) more than 1/5 of french births

Regions of France

800 000 births

Parisian region (IDF)

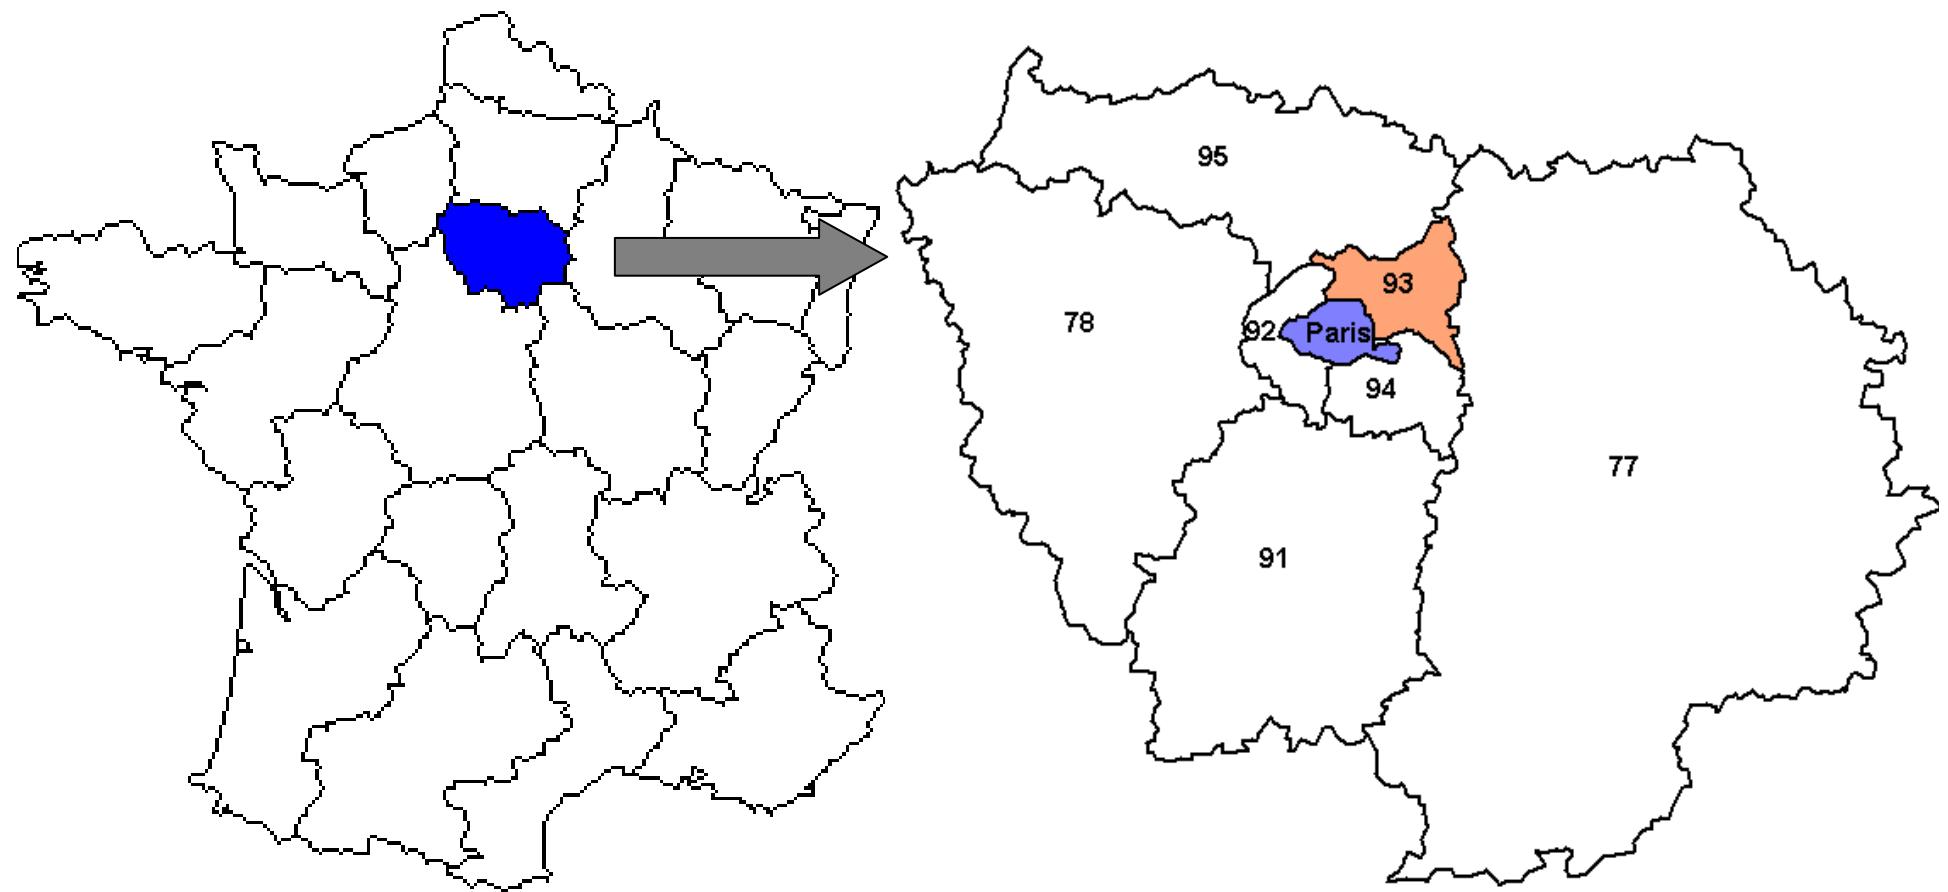

180 000 births

Background (2): 11,5 millions inhabitants and marked contrasts

- High level of birth rate (fertility index 14 to 19)
- The youngest region
- First economical region
- Longer expected life time but health level better in west and centre
- Variable Demographic expansion
- Aging Population
- High Income level but unequally distributed and Variable Inemployment rate
- Rather high Infant mortality rate in north and east

*Regional Health Observatory –Regional Strategic Public Health Plan
2006-2010 Indicators Report (dec 2009)*

Background(3): Parisian region (IDF) more than 1/5 of french births

Regions of France

800 000 births

Parisian region (IDF)

180 000 births

Background (4)

Inequalities in perinatal healthcare (2008):

- Neonatal mortality rate
 - 2.7/1000 IDF > 2.3/1000 France
- Stillbirth rate
 - 12/1000 (from 9.5 to 14.7 /districts) IDF > 9.6/1000 France

Are they due to inequities?

A Regional health authority concern in planning process:

- Regional Strategic public health Plan (submitted to consultation in 2011)
- Regional health Organization scheme (2012-2016):
 - Closure of some central structures:
 - an opportunity for a new allocation of resources
 - toward a balanced distribution?

Objectives

- 1- Check the ability of our information system to produce suitable data**

- 2- Answer quickly to Regional Agency planning service demand**

- 3- Establish grounds for further reflection about perinatal issues and accessibility to maternity care from a social and geographical point of view**

Methods

Hospital discharge data system (HDS)

From Perinat-ARS-IDF (presented in ORAHS 2009)

Compared

Civil registration of births statistics

From National Institute of statistics (INSEE)

Census data

From National Institute of statistics (INSEE)

Administration decision records

From Regional Health Authority

On population-based approach

By descriptive statistics

=>SAS software

By geographical representation

=>MapInfo software

Individual data

Pooled data

Results outline

- Socio-economic characteristics
- Perinatal indicators:
 - living births, still birth rates, hospital neonatal mortality, low birth weight births, care access
- Perinatal structures: distribution of NICU
- New allocation of resources proposal
- Spatial heterogeneity: focus on Hauts de Seine district

Socio-economic characteristics (1)

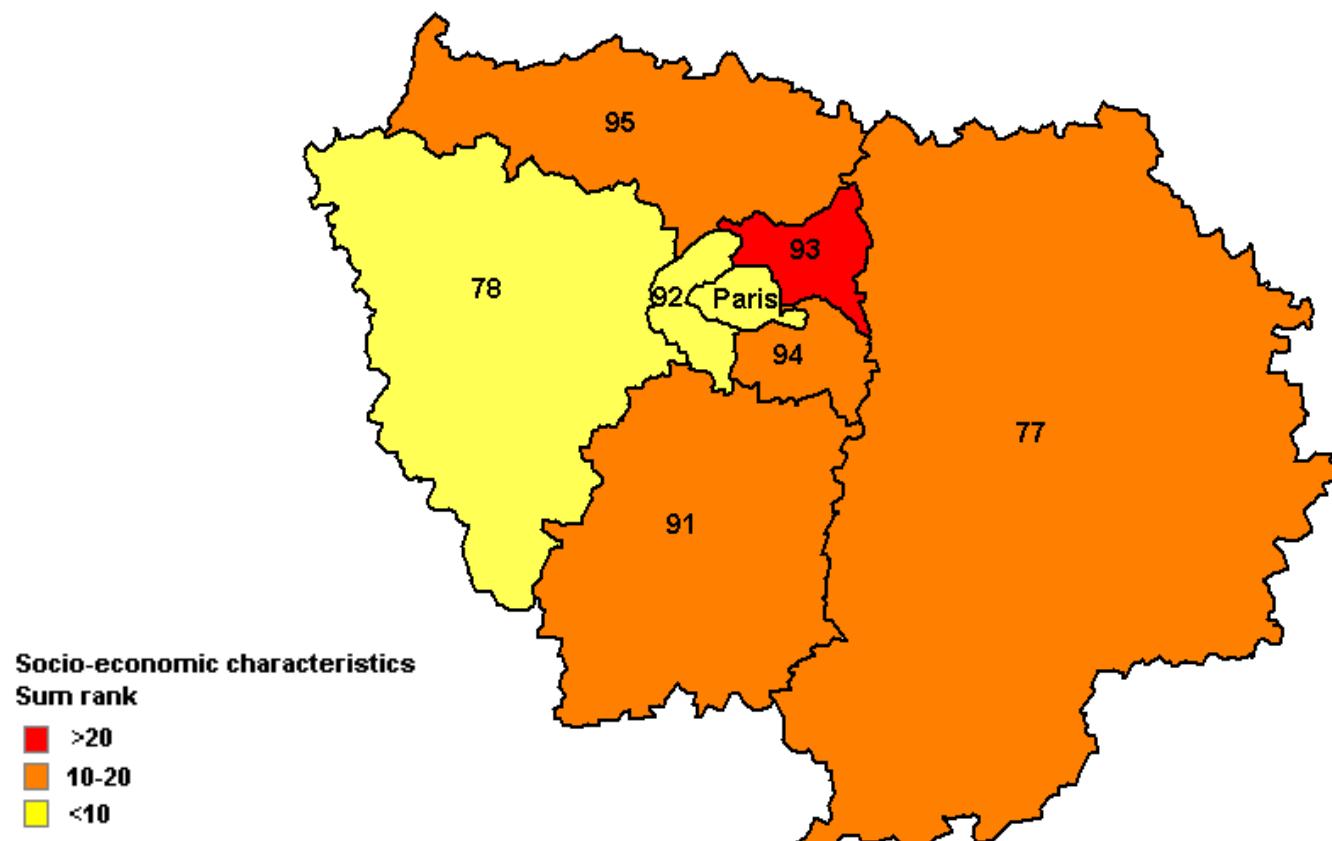

District		Unemployment rate		Manual workers rate		Education attainment*		Sum Rank
75 Paris	4	11,0%		1	7,4%	1	32,9%	7
77 Seine-et-Marne	3	9,1%		7	19,7%	7	59,7%	17
78 Yvelines	1	8,3%		3	13,2%	3	47,2%	7
91 Essonne	2	8,7%		5	16,1%	5	54,0%	12
92 Hauts-de-Seine	5	9,7%		2	9,6%	2	40,7%	8
93 Seine-Saint-Denis	8	16,2%		8	23,0%	8	64,6%	24
94 Val-de-Marne	6	11,0%		4	14,8%	4	52,1%	13
95 Val d'Oise	7	11,2%		6	18,1%	6	58,4%	19
Ile-de-France		10,7%		14,4%		49,4%		

*Education attainment: % population without baccalaureat

New allocation of NICU beds

- Assumption: Neonatal intensive care **needs** assessed from NICU **observed stays**
 - Source : *Perinat-ARS-IDF, HDS 2009*
- According to an occupancy rate of 80%

$$\frac{0,8 \times \sum \text{full NICU length stay}}{365}$$

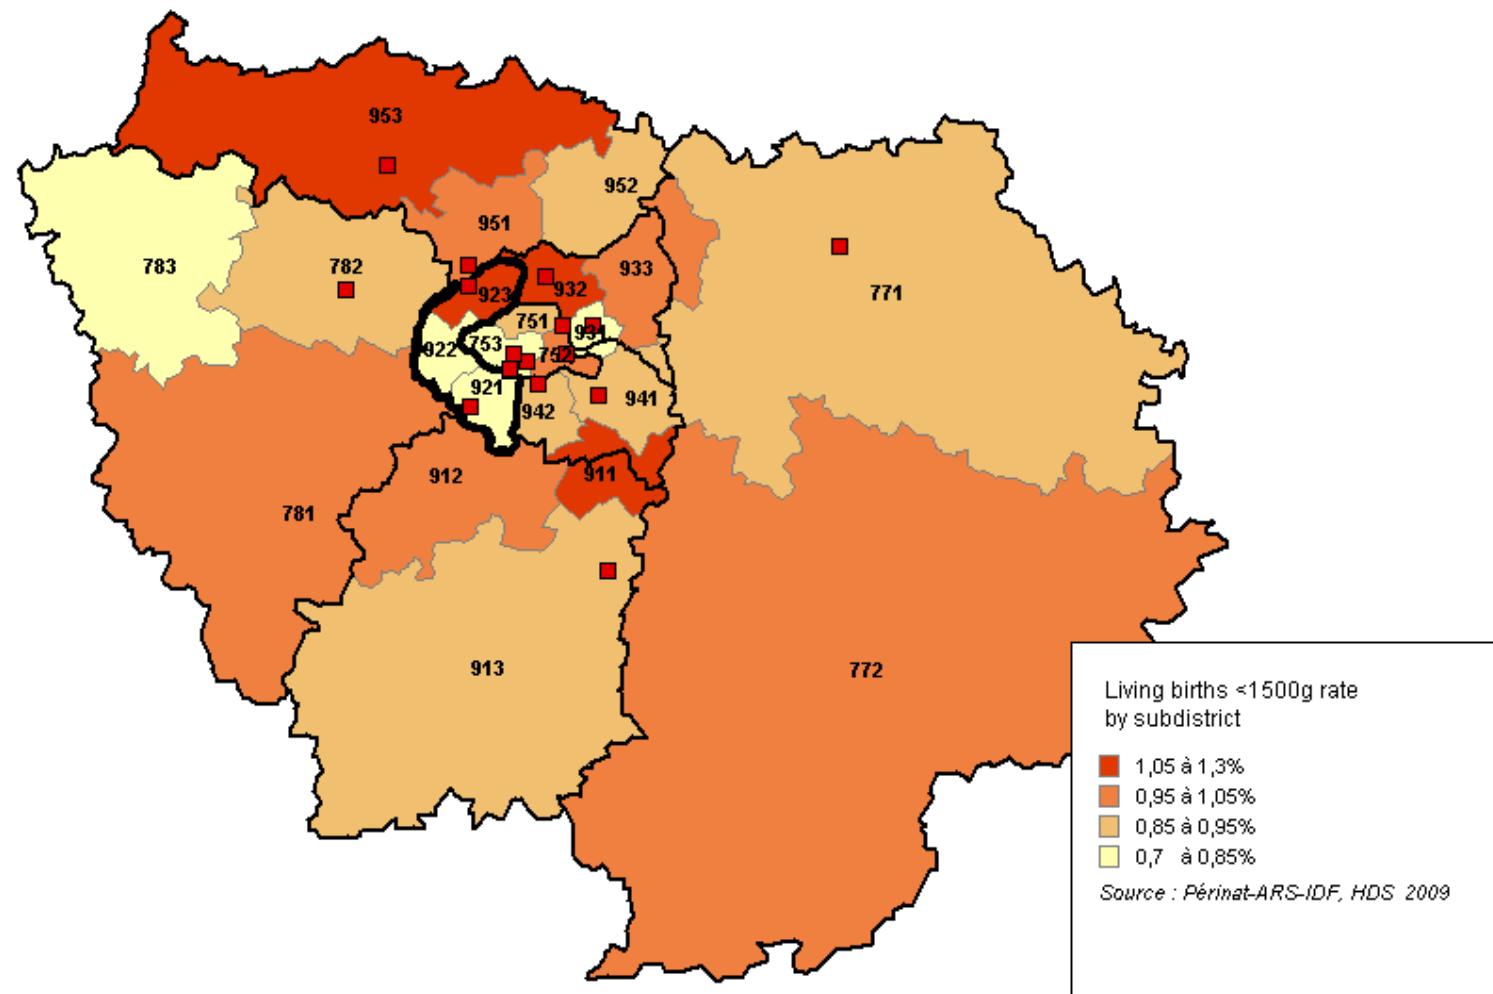

New allocation of NICU beds proposal

Focus on Hauts-de-Seine (92)

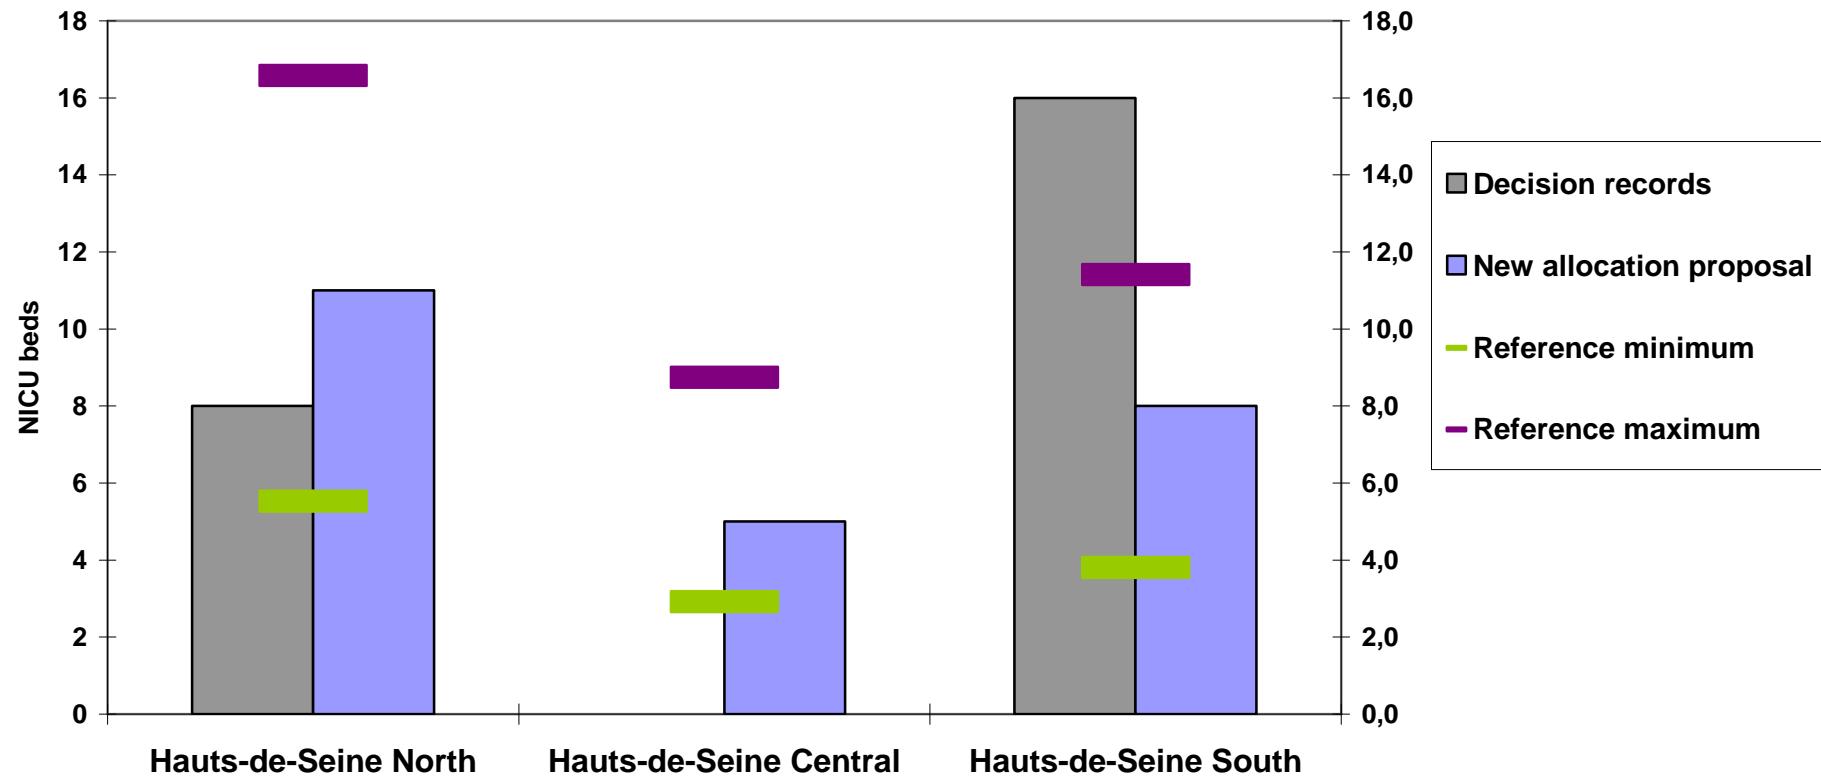

Very low birth weight rate by subdistrict

New allocation proposal for Hauts-de-Seine

Subdistrict	Living births	Number of <1500g	<1500g rate	<1500g rate in PCIII
Hauts-de-Seine North	11 050	127	1,15%	84,3%
Hauts-de-Seine Central	5 827	47	0,81%	80,9%
Hauts-de-Seine South	7 604	64	0,84%	92,2%
Hauts-de-Seine	24 481	238	0,97%	85,7%

χ^2 p=0,037 χ^2 p=0,19

Discussion (1)

➤ Completeness and Quality of the data :

- **Hospital Discharge Summary (HDS) birth data compared** to births by IDF residents **in vital statistics « INSEE »**: problems with change in the registering law for stillbirth neonates in 2008.

2008->2009
Living births
96.7% -> 97.3%

2008 ->2009
Still births
87% -> 78.4%

- **Administrative Decision records compared with a professional enquiry:** problems to know the actual availability of neonatal beds along the years and seasons (variations mainly due to skilled staff availability)

Discussion (2)

- **Choice of indicators and Ecological approach:**
 - How to explain mortality / very low birth weight rate differences?
 - Part of socio-economics characteristics?
 - Part of care access and resources?
- **Distribution of resources:**
 - Distribution of resources: better allocation according to needs?
 - Bias in measuring « use » instead of « needs »?
 - No measure of professional availability in our proposal
 - District scale may be too large because of heterogeneous population as it is shown in 92 district
 - There is no actual district « barriers » for patients, « artificial limit »

Conclusion and future work

- Combining **analysis** from routine information system and other statistics should help to provide « **validated** » **data** for a **regional vision** of restructuring
- Analysis on a territorial basis is important to evaluate health care **needs** and the adequacy, **accessibility** to health care
 - *Is it enough to reverse the « inverse care law »?*
- Future work is thought in collaboration with conducted OR by Ecole des Mines in our **perinatal networks in Hauts de Seine 92**
 - *Thanks to ORAHS conference in 2009 for allowing this collaboration project!*

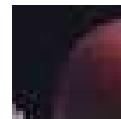

Thank you for your attention

Un système d'information en périnatalité dans la région Île-de-France

Un projet de l'ARS Île-de-France développé en partenariat avec les professionnels de la périnatalité et du [PMSI](#) à partir des données de 2006.

En 2006, 23% des naissances vivantes en France étaient enregistrées dans les établissements d'Île-de-France (183 794 nouveau-nés nés en IDF). 182 758 nouveau-nés sont domiciliés en IDF (source [INSEE](#)).

En 2009, 181 565 nouveau-nés vivants sont domiciliés en Île-de-France.
